PROFESSIONAL SUMMARY

Data Engineer with 8+ years building ETL pipelines, data warehouses, and reporting layers across insurance, advertising technology, automotive retail, association management, and education. Core strength in SQL Server, T-SQL, SSIS, SSRS, Power BI and Python, extended into PostgreSQL, Snowflake and Apache Airflow, with hands-on delivery experience on Azure Data Factory and Databricks and on GCP Cloud Storage and BigQuery for log-level advertising data. Strong on API-driven data ingestion — pulling data from vendor REST APIs and automated email/CSV report feeds, landing it into SQL staging tables, and transforming it into unified reporting models. Delivered a full legacy-to-Azure ETL migration for Guidewire insurance data, Python and Airflow orchestrated PostgreSQL pipelines consolidating multi-platform advertising data followed by a PostgreSQL-to-Snowflake migration, and CRM data integrations on Microsoft Dynamics. Work fully remote with 4-6 hours of US time zone overlap; open to full-time and contract engagements.

TECHNICAL SKILLS

Databases & SQL: MS SQL Server (2014-2019), T-SQL, PostgreSQL, Snowflake, Stored Procedures, Functions, Views, Query Optimization, Performance Tuning

ETL & Orchestration: SSIS, Apache Airflow (DAGs), Python ETL scripting, Domo Dataflows, Data Warehousing, Fact & Dimension Modeling, Incremental / Delta Loads, Data Migration (incl. PostgreSQL to Snowflake), Data Validation & Reconciliation

API & File Ingestion: REST API integration (token / OAuth authentication, pagination, rate limits, date-windowed incremental pulls), JSON parsing, automated email report retrieval, CSV / Excel / flat-file ingestion into SQL staging layers

Programming: Python (requests, pandas, JSON handling, automation scripting), SQL

BI & Reporting: Power BI, SSRS, Domo, FetchXML

CRM & Platforms: Microsoft Dynamics CRM / 365, KingswaySoft SSIS Integration Toolkit, XRM Toolbox, ProTech AMS, DealerSocket CRM/DMS, Guidewire (Claims, Policy data)

Ad Platform Data: Google DV360, LinkedIn Ads, Meta Ads

Cloud & Big Data: Snowflake, Azure Data Factory (ADF), Azure Databricks, Azure SQL, Azure DevOps, Google Cloud Platform (Cloud Storage buckets, BigQuery), AWS S3, Log-Level Data Processing

Tools: SSMS, Visual Studio, Azure DevOps, ServiceNow, SQL Server Agent

Domains: Insurance, AdTech, Automotive Retail, Associations & Membership, Education / EdTech

PROFESSIONAL EXPERIENCE

Lead Data Engineer

R Systems International | Dec 2024 - Present

ProTech Association CRM Data Integration

- Designed and developed SSIS packages using the KingswaySoft SSIS Integration Toolkit to extract, transform, and load association and membership data from CSV, Excel, and flat-file sources into the ProTech CRM platform built on Microsoft Dynamics.
- Integrated Memberships, Committees, Chapters, Accounts, Contacts, and Sponsorships modules into a unified CRM data structure with synchronized records across modules.
- Automated recurring ETL workflows for periodic data loads, replacing manual file processing and keeping CRM data current without intervention.
- Implemented data validation, mapping, and cleansing logic through KingswaySoft components to eliminate duplicate and inconsistent member records and manage upserts against Dynamics entities.
- Built parameterized SSRS reports using FetchXML queries covering membership growth, sponsorship revenue, and committee engagement, delivered directly from the CRM environment.

- Optimized FetchXML query performance and worked with business users to gather reporting requirements and validate output.
- Owned testing, deployment, and documentation of all SSIS packages and SSRS reports, plus ongoing monitoring and enhancement.

Senior Software Engineer

Zensar Technologies | Sep 2022 - Dec 2024

Viamedia – Advertising Technology Data & Reporting

- Built Python-based ingestion routines that pulled campaign and performance data directly from advertising platform REST APIs including Google DV360, LinkedIn Ads, and Meta Ads, handling authentication tokens, pagination, rate limits, and date-windowed incremental pulls.
- For platforms without usable API access, automated collection of scheduled email reports, parsing the CSV and Excel attachments and routing them through the same standardized ingestion path as the API feeds.
- Loaded raw API (JSON) and file-based payloads into SQL staging tables, retaining a raw layer for traceability, reprocessing, and audit before any transformation was applied.
- Wrote transformation logic in PostgreSQL to cleanse, deduplicate, standardize, and consolidate campaign data arriving in differing formats, schemas, and metric definitions from each ad platform into a single common model.
- Orchestrated and scheduled the end-to-end ingestion, staging, and transformation flow using Apache Airflow DAGs with task dependencies, retries, failure alerting, and backfill support for historical reloads.
- Migrated the consolidated multi-platform campaign data and unified reporting layer from PostgreSQL to Snowflake.
- Worked with log-level (impression and event-level) advertising data on Google Cloud Platform, creating Cloud Storage buckets to receive raw log-level data transfer files from the ad platforms.
- Created BigQuery datasets and tables over the log-level data and wrote SQL to aggregate granular impression, click, and conversion records into campaign-level metrics feeding the downstream reporting layer.
- Designed target fact and dimension tables and reporting views forming the unified reporting layer over consolidated multi-platform campaign data.
- Implemented reconciliation and data quality checks comparing platform-reported figures against warehouse totals to catch missed pulls, partial loads, and source-side report discrepancies.
- Used Domo as both an ETL and reporting platform for the advertising data stack, building Domo dataflows to extract and transform campaign data and developing dashboards and reports on top of them.
- Developed Power BI and Domo reports and dashboards covering campaign performance and advertising metrics for business stakeholders.

Guidewire – Data Warehouse Reporting & Analytics (Multifamily Housing Insurance)

- Led migration of legacy ETL to Azure for Guidewire insurance data, moving from AWS S3 as source to on-premise SQL Server as destination, enabling near real-time data availability for downstream analytics and future ML modules.
- Built a scalable data movement and transformation framework using ADF pipelines and Databricks notebooks.
- Designed and configured ADF pipelines for ingestion, transformation, and orchestration, including triggers, activities, and linked services for end-to-end automation.
- Developed and optimized Databricks notebooks (SQL) for data cleansing, transformation, and aggregation across raw and curated zones.
- Created reusable, parameterized pipelines supporting incremental and delta load patterns.
- Implemented data quality checks and validation logic in Databricks to ensure accuracy and consistency across loads.
- Modeled Fact and Dimension tables and established relationships to support downstream reporting.
- Performed full-load and incremental ETL testing with reconciliation through an audit framework.
- Developed Power BI and SSRS reports delivering business insight on top of the migrated warehouse.

Data Implementation Specialist

Solera India Pvt. Ltd. (DealerSocket) | Jan 2021 - Sep 2022

Automotive CRM & Dealership Data Implementation

- Built ETL processes to extract, transform, and load automotive data covering vehicle sales, service history, and inventory management for dealership clients.
- Designed Fact and Dimension tables aligned to the automotive data warehouse model.
- Developed SSIS packages automating complex data migration and transformation workflows across environments.
- Integrated and standardized data from multiple dealership management systems (DMS) into a single unified reporting layer.
- Created SSRS reports and dashboards surfacing KPIs including sales performance, vehicle turnover, and service efficiency.
- Scheduled and monitored SQL Server Agent jobs, configured alerts, and automated ETL tasks for high availability.
- Conducted data quality checks, reconciliations, and query performance tuning.
- Partnered with onsite and business teams on requirement gathering, data mapping, functional validation, UAT, and deployment.

Data Engineer

Illuminate EdTech India Pvt. Ltd. | Mar 2018 - Jan 2021

STARS – Student Test Analysis and Reporting System

- Built ETL models automating data extraction for a secured, web-based student assessment analysis and reporting platform.
- Developed SSIS packages loading incoming assessment data into target destinations, with validation scripts enforcing business rules.
- Wrote complex SQL queries, joins, and subqueries across multiple source tables to produce required reporting datasets.
- Maintained and administered SSIS environments - job creation, alerts, SQL Mail Agent, and package scheduling.
- Ran end-to-end unit testing and User Acceptance Testing across all delivery phases.
- Supported production deployment and authored ETL process documentation for the support team.

EDUCATION

B.E., Electronics & Communications Engineering | 2017

UBDT College of Engineering (VTU), Davangere, Karnataka
